Centralized CAN Cell Group Module

Product Code: CCGM023A

Introduction

Centralized Cell Group Module (CCGM) is a battery cells communication adapter (or "Slave unit") equipped with two CAN connectors for easy BMS system assembly and integrated proprietary EMUS software that allows data transfer within 100ms frequency. The CCGM performs all cell data measuring by itself, so the product allows saving space by reducing the need of having cell modules and three-way connectors. The CCGM increases the speed of the cell data broadcasting and provides for each connected battery cell balancing functionality.
Applications

- Scalable system up to 24 CCGMs per Control Unit
- Ideal for battery modules up to ~200Ah. Higher capacity could require longer balancing periods
- Suitable for prismatic, cylindrical and pouch cells
- Electric vehicles and autonomous vehicles
- Storage systems
- Photovoltaic battery systems

Features

- 2x CAN connectors to easy daisy chain the CCGMs to the CAN bus
- Each CCGM can monitor from 6 up to 16 series cells
- 400mA passive balancing current per cell
- 5x External temperature sensors can be connected to each CCGM (10kΩ NTC)
- In combination with the Temperature Breakout (TBB011A) each CCGM can be complemented with up to 30 temperature sensors (15 NTCS per TBB011A)
- Adjustable CAN speed to 50, 125, 250, 500kbps or 1Mbitps
- Any lithium chemistry, series-connected battery pack, or a pack of multiple parallel strings

Electrical Characteristics

Table 3. CCGM023A electrical characteristics

Item	Value	
Supply voltage	12-95V	
Supply voltage battery	12.0 VDC to 79.2 VDC (firmware limited by 72.8VDC)	
Power supply reverse protection	yes	
Current consumption	From battery	Active mode 5mA @ 67.2V Sleep mode 30uA @ 67.2V
	From CU	7.3mA @ 15V
Maximum Balancing Current	400mA*	
Isolation voltage	1000V	
Transient/overvoltage protection between CAN H/CAN L and GND (and vice versa)	24V	
Cell voltage limits	0-4.95V	

*Depending on thermal conditions

Product Code: CCGM023A

Other Specifications

Table. 4 CCGM023A other specifications

Item	Conditions	Value
Cell Count	Other Li chemistries	6–16
	LTO cell chemistry	8–16
CAN Speed	-	50kbps, 125kbps, 250kbps, 500kbps, 800kbps, 1Mbps (by default 250kbps)
Reserved CAN IDs	-	0x1FFFFEE5, 0x1FFFFEE6, 0x1FFFE5E5, and 0x1FFFE5E6
Operating Temperature	-	–40 to +85 °C
IP rating	-	IP50
Weight	Without Quick Start Kit	105g
	With Quick Start Kit	145g
Cell communication wire length	In our Quick Start Kit	45cm
Temperature sensors wire length	In our Quick Start Kit	45cm
Cell Voltage	General Firmware	2.01 – 4.54V
	LTO Firmware	1.01 – 3.54V

Installation

To set up the 16 cells and 5 external temperature sensors please refer to figure below.

Product Code: CCGM023A
To set up less than 16 cells please refer to figure below. Example picture for 8 cells:

Cells Layout: (using other amount of cells)

Minimum cell count depends on the cell chemistry used. The lowest supported battery pack voltage by internal CCGM parts is 12V, therefore if LTO cells are used then the minimum cell count should be calculated accordingly.

E.g., if LTO cell's expected lowest voltage is 1.5V then the minimum number of cells required would be 8 [12V / 1.5V = 8 cells].

$$V_{BatTotal} \div V_{CellMin} = MinimumNumOfCells$$

NOTE: the absolute minimum total battery pack voltage is 9V, however it is not guaranteed that the device will sense cell voltages correctly.

NOTE: Connection must start from the most negative cell to the most positive. In cases when cells number is less than 16, e.g., 8 cells, then free cells connection wires (dedicated for 9th-16th cells) must ALL be connected to the last 8th (most positive cell).
