

# Cell Module – A/B Type (CM010)

## INTRODUCTION

**EMUS Cell Module** is the device which once mounted on a cell measures cell's voltage, temperature, its own temperature and broadcasts all measured values to main unit. Also, cell module using previously mentioned values and regulates the balancing current to keep cell's voltage lower than the balancing threshold, while at same time keeping its own temperature lower than certain maximum value to protect itself from overheating.

## APPLICATIONS

- Any lithium chemistry, series connected battery pack of up to 100 cells if using serial cell communication. (distributed regular)
- Any lithium chemistry, series connected battery pack, or pack of multiple parallel strings, of up to 3200 cells total, if using EMUS CAN Cell Group Modules. (distributed grouped)
- Applications with battery capacity up to 410<sup>1</sup> Ah.

## FEATURES

- External temperature measurement sensor (100k).
- Digital I/O, Analog, proprietary serial interface for communication
- Communication indicating green LED.
- Balancing level indicating red LED.
- Maximum balancing current up to 1.3 A.

## MECHANICAL INFORMATION

<sup>1</sup> The maximum value of the battery capacity using this type of cell module depends on the battery pack cells quality, lifecycle, grading, temperature control, and other factors. For more detailed information about cell module selection please refer to EMUS G1 User Manual.
