Product Code: CS013A

Introduction

The Bus Bar type of EMUS G1 Dual Range Current Sensor is designed specifically for use in battery packs that consists of prismatic form factor cells. It doubles as an interconnecting bus bar, and due to the galvanic isolation between the sensor and the conducting part, it can be installed anywhere in the battery pack between two adjacent, series-connected cells.

Two separate measurement channels with different

sensitivity, which allows to accurately measure small

currents without sacrificing the range of measurable

Hall-effect current measurement method which

provides the characteristic galvanic isolation between

the sensor and the conductive part

Applications

- High power batteries requiring high current draw
- Specifically designed to be used in EMUS battery management system
- EMI can affect to the current sensor, and it is also recommended to calibrate it once installed
- Under frequent high currents, recalibration maintenance could be needed

Measurement Direction

The Bus Bar Type Current Sensor is intended to measure positive current in the direction detailed in the picture below. It is possible to change the direction parameter using EMUS G1 Control Panel. Charging currents must always be perceived as Positive by the current sensor for correct functioning.

Product Code: CS013A

Item	Conditions		Value
	>80A		±500mA
Decelution	With G1 CU021, FW 2.7 (10bit ADC)	<80A	0.1A
Resolution		>80A	0.3A
Basis Isolation DC Voltage	-		1kV
Supply voltage	-		5.0 VDC
Current consumption	At typical supply voltage		25 mA
Conductor resistance	-		20 µ0hm

Other specifications

Table 3. CS013A other specifications

Item	Value		
Operating temperature	-40 to +85 °C		
IP rating	IP40		
Weight	98 g		
Sensor calibration procedure	 Open EMUS Control Panel (from version 2.7) Check for correct Sensor Type To Calibrate L value Run constant current from 30 up to 70A Make sure you connect current measurement device to measure actual value Press Calibrate L value, enter momentary current value from measurement device Make same process for H Value, only run current of more than 130A 		
Default calibration values	L: 2340 / H: 22500
